Analyze and Execute with ILS Inventory Management

Business challenges, such as hard-to-track shipments, manual data entry or traceability issues, can be challenges of the past. Leverage the power of ILS to turn these manual processes into electronic data solutions that can be integrated into your internal systems. This real time information can enhance and simplify numerous business transactions, creating more time for growing all aspects of your business.

With benefits like bar coding, configured reorder points and enhanced inventory search capabilities, your processing time will be reduced empowering you to do more business in less time while using fewer resources. ILS Inventory Management also provides integration to ILSmart allowing you to update your inventory from your system of record. Let the ILS team help you create a solution that monitors your inventory from one location and gives you easy access to traceability information. Gain peace of mind from knowing where your inventory is located and what inventory you have available, without manual checks of numerous systems.

Expand Efficiencies

- Gain greater customer service with real time requirement visibility
- Increase efficiencies with automated multi-line receiving and issue confirmation
- Drive continuous improvement in inventory planning and processing
- Automate cycle counts for improved spend controls
- Automate ILSmart inventory updates
